Key Information

FIRST USE OF THE MACHINE

- When the machine is delivered, the steel surfaces are protected with a nylon anti-scratch film. This film has to be removed.
- The insulating materials used during the manufacturing and the residuals of grease due to the mechanical installation of single parts, heat and produce smoke, for this reason, **it is necessary to start the machine at maximum temperature for 15-20 minutes.**

GENERAL CLEANING

- Clean the grill at least once a day and, if necessary more often.
- All the machine parts that are in contact with the product must be cleaned.
- Never clean the machine by means of compressed water or water jets.
- Cleaning can be performed when surface is hot, scrape with a metallic brush on the cooking grid several times.
- Empty the grease tray.
- It is advisable to perform these cleaning operations when the grill temperature is at the minimum so that the residual grease that sticks to the grid can melt.
- Do not pour water or other liquids on the grill when it is hot, because the changes of temperature can provoke their breaking.
