

Temperature Logger DL1KIT

0.75" x 5.38" x 5" (H x W x D)

USB data logger for temperature recordings on any SUMMIT unit; aftermarket installation (order DL1 for pre-installation)

Highlights:

Designed for aftermarket installation only; for this option pre-installed on a SUMMIT refrigerator, order DL1 with your unit

Includes 64 MB flash drive to hold over 2.5 million temperature readings

Glycol bottle to simulate vaccine temperature for high accuracy

Outputs for fast viewing in Microsoft Excel or any .CSV compatible program

Product Features:

Traceable probe	Quality probes made for us by US Sensor, accurate within 1° C (1.5° C when installed on low temperature freezers operating between -30 and -25° C)
Stores data to USB flash drive	64 MB flash drive included for easy plug-in and output on any computer
Long term data storage	USB can hold over 2.5 million temperature readings for over 80 years of data storage
Easy analysis	Simply plug the flash drive into your computer and graph or chart in Microsoft Excel or .CSV compatible program
Compact size	Sized to fit on undercounter models with no depth protrusion
Programmable time and date	Easy to set before using the device
Automatic temperature recording	Records interior temperature every 15 minutes
Compatible on any Summit model	Can be installed on refrigerators and freezers, including chest, front-opening, drawer, compact, reach-in, and built-in undercounter units; for this data logger factory installed on your unit, order DL1
Indicator light	LED blinks when in operation and goes into steady mode to alert that the USB drive is full
