**POT RACKS**  
by John Boos & Co.

**John Boos & Co.**

has been America's leading manufacturer of kitchen equipment designed for professional chefs and commercial foodservice since 1887. Now, we're proud to introduce a new line of pot racks for residential kitchen applications.

**PotTrak**

The PotTrak is an innovative design featuring three rectangular solid maple frames of incrementally larger sizes fastened together with offset aluminum hanger/spacers. This design creates two internal "tracks" for hanging pots, pans, utensils, or any other hangable kitchen tools. Each of the two tracks runs the entire rectangular area of the rack. Offset stainless steel hanger/spacers on each track allow items to be hung around the circumference of the entire rack. This affords an unobstructed view of your collection and prevents banging and dents. The stainless steel hanger/spacers and main rack mounts combine with the natural beauty of Northern hard rock maple to create a clean and modern look. The PotTrak is 24" deep and 48" wide.
