

THE ART OF BLENDING

Introducing Advanced Blending Control

Blending just
got easier with
Blendtec A.B.C.TM—
the perfect blend
of brains, brawn,
and beauty.

Still the Innovation Leader

K-TEC pioneered the first blender with programmed blend cycles, the first in-the-counter blender, and the first quiet blender. That was in 1995. *Today*, Blendtec sets a higher standard with its exclusive *Advanced Blending Control™ (A.B.C.)* blender.

Blending as easy as A.B.C.

Automatic Start

Close the sound enclosure and the *Blendtec A.B.C.™* runs the last program selected and shuts off when the blend cycle is complete.

Blender Safety

The *Blendtec A.B.C.™* locks in safety. It won't start until the sound enclosure is closed, and stops when it is opened.

Customer Programming

Now you can custom program your 6 blending control buttons just the way *you* want.

Brains

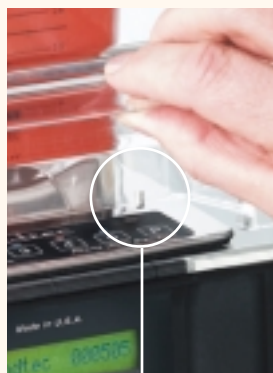

CUSTOMER PROGRAMMING

First, plug your *Blendtec A.B.C.™* blender into your personal computer and run a copy of our *Blend Profile Programming™* software. Now, with a few clicks of the mouse, you can easily program a custom profile of changing blade speeds for each kind of drink. And with several profile buttons to choose from, you need only the *Blendtec A.B.C.™* to create a full menu of blended beverages. *Advanced Blending Control™* assures uniform drink consistency.

JUST CLOSE THE LID!

For the safest, quickest, and easiest operation, nothing beats the Automatic Start feature with our *Electronic Interlock Technology™*. Simply close the sound enclosure and let Blendtec do all the work.

Electronic switch runs the last program selected when lid is closed.

Brawn

50% MORE POWER

Blendtec delivers 50 percent more power than other commercial blenders. Your drinks are made in less time with less wear and tear on the motor.

ONE TOUGH MOTOR COUPLING

Your motor coupling will never break or wear out.

We warranty it for life! The surrounding foundation is a highly polished stainless steel casting that will last forever.

100% SOLID-STATE ELECTRONICS

A sleek membrane touchpad controls the most advanced blending electronics on the market—eliminating less reliable knobs, dials, and switches that often break or wear out.

LEDs show which blend program has been selected.

THE WIDEST, HEAVIEST-DUTY BLADE

Big ice cubes? Frozen fruit? Bring it on! No blending job is too tough for this rugged blade.

Blade wing-span of almost 4 inches

Beauty

ATTRACTIVE, FUNCTIONAL DESIGN

The *Blendtec A.B.C.TM* is more space efficient by sporting a lower-profile design and smaller footprint. The half-gallon jar is shorter and half the weight of other jars with comparable volume. Jars are stackable to save even more space.

Our virtually unbreakable jar features easy-to-read measurement marks and can be personalized with your logo. The quick-fit lid comes off with the flip of a thumb.

Blendtec jars feature easy grip handle, vibration isolated blade, high-capacity shape, and 3-directional pouring.

ABOVE-COUNTER AND IN-COUNTER, IT'S A BEAUTY!

Blendtec's easily convertible design allows you to install it *above* the counter and *in* the counter—anywhere you want. It's versatile.

SOUNDS BEAUTIFUL

"Shhhh." Our blenders are often found in bookstore cafes. What you hear is the quiet sound of precision and hand-crafted quality.

Above-Counter Smoother™

In-Counter Smoother™

Blendtec A.B.C.TM with Advanced Blending Control

Heavy-duty 13 AMP or 18 AMP motor. The most powerful motor available. • Half-gallon GE Lexan® Jar. • Liquid Crystal Display (LCD) reports cycle counts and diagnostics. • Acrylic sound enclosure offers bright, clear, 360° visibility.
